

Dropping the retired Grazing class fixes the AgriWebb holdout, not just the internal metric
(site-level: 29/104 flip from wrong to correct, 27 of those were specifically mis-called Grazing; only 2/104 newly wrong)

(a) Independent AgriWebb holdout, 104 farmer-recorded crop paddocks — never trained on, either model

(b) The failure group3 removes by construction (no Grazing class)
